| IID | Title | Description |
|---|---|---|
| 2 | Create project definition | https://reset.inso-world.com/repo/2025ws-ase-pr-group/25ws-ase-pr-qse-02/-/wikis/Home/Project-definition |
| 5 | Project Architecture definition | Define the project architecture and the technologies which will be used for the project.<br><br>https://reset.inso-world.com/repo/2025ws-ase-pr-group/25ws-ase-pr-qse-02/-/wikis/Home/Project-Architecture |
| 7 | Create project contract | |
| 8 | MR 1 Preparation | For slide-creation, reading docs, etc. |
| 9 | N1 - Email Notifications | # User Story<br>As a user, I want to receive email notifications when important events happen so that I stay informed even when I am not using the app.<br><br># Acceptance Criteria<br>- Email sent for key events (new message, mention, task, system alert)<br>- Subject + event info + link included<br>- Only if valid email & user enabled email notifications<br>- No duplicate notifications<br>- Failures are logged |
| 10 | N2 - Notification Preferences | # User Story<br>As a user, I want to configure which notifications I receive so that I only get messages relevant to me.<br><br># Acceptance Criteria<br>- User can enable/disable notification types<br>- Preferences applied immediately<br>- Confirmation shown when saved<br>- Notifications respect settings |
| 11 | N3 - Notification History | # User Story<br>As a user, I want to view a history of my notifications so that I can reference past alerts.<br><br># Acceptance Criteria<br>- List of past notifications<br>- Mark as read/unread<br>- Filter by type/date/status |
| 12 | N4 - Push Notifications | # User Story<br>As a user, I want to receive push notifications on my phone so that I receive real-time alerts.<br><br># Acceptance Criteria<br>- Push sent for same triggers as email<br>- Only delivered if user opted in & device registered<br>- Don't get notifications twice when Browser-push-notification is available |
| 13 | N5 - Notification Service Infrastructure | # User Story<br>As the system, I need scalable notification processing so that alerts are delivered reliably.<br><br># Acceptance Criteria<br>- Notification queue/service<br>- Retry logic<br>- Error logging & monitoring |
| 14 | A1 - Audit Log Changes | # User Story<br>As a system administrator, I want all important data changes to be logged so that I can track modifications for security and compliance.<br><br># Acceptance Criteria<br>- Every create/update/delete action is logged<br>- Audit entry includes timestamp, user ID, changed fields, and old/new values<br>- Logs stored securely and tamper-resistant<br>- Supports filtering/searching by date and user |
| 15 | A2 - Identify User Who Made Changes | # User Story<br>As a system administrator, I want to see who made a change so I can trace actions back to responsible users.<br><br># Acceptance Criteria<br>- Each audit entry contains the acting userâ€™s ID and display name<br>- Supports cases where automated system actions occur (system user logged) |

| IID | Title | Description |
|---|---|---|
| 16 | A3 - Audit Log Access & Viewing | # User Story<br>As a system administrator, I want a secure interface to view audit logs so that I can monitor system activity.<br><br># Acceptance Criteria<br>- Authorized users can view audit logs in a list/table<br>- Filtering by date, user, and action type<br>- Export log capability (CSV/PDF optional)<br>- Access restricted by role/permissions |
| 17 | AU1 - Login via OAuth | # User Story<br>As a user, I want to log in using an authentication provider (e.g., Google) so I can access the platform securely.<br><br># Acceptance Criteria<br>- Login via OAuth<br>- Successful login creates/links user account<br>- Secure token handling |
| 18 | V1 - View Dashboard Shifts | # User Story<br>As a volunteer, I want to see my current and upcoming shifts on my dashboard so I know where I need to be.<br><br># Acceptance Criteria<br>- Dashboard lists assigned shifts<br>- Shows date, time, role, location<br>- Real-time data |
| 19 | V2 - View Event Schedule (My Shifts) | # User Story<br>As a volunteer, I want to see my schedule for a selected event so I can plan ahead.<br><br># Acceptance Criteria<br>- Shows volunteerâ€™s shifts only<br>- Event-specific view<br>- Valid only for events user has access to |
| 20 | V2XL - View Full Event Schedule | # User Story<br>As a volunteer, I want to see the full event schedule (if permitted) so I can understand team coverage.<br><br># Acceptance Criteria<br>- Shows all shifts for event<br>- Access restricted by permissions/tags<br>- No access to unpublished schedules |
| 21 | V3 - Filter Schedules | # User Story<br>As a volunteer, I want to filter shifts by tag, open positions, role, and location so I can find relevant shifts.<br><br># Acceptance Criteria<br>- Filters include tag/role/location/open slots<br>- Only permitted filters shown<br>- Applies to schedule and list view |
| 22 | V4 - View Shift Details | # User Story<br>As a volunteer, I want to see shift details so I understand requirements<br><br># Acceptance Criteria<br>- Modal view in schedule<br>- Full page when opened directly<br>- Shows time, role, location, description |
| 23 | V5 - Self-Assign to Position | # User Story<br><br>As a volunteer, I want to self-assign to open positions so I can volunteer for shifts.<br><br># Acceptance Criteria<br><br>- Allowed only if position unlocked<br>- Prevents conflicts (time overlap, rules)<br>- Confirms successful assignment<br>- UI displays expected points for the shift (base + incentives + dynamic) |

| IID | Title | Description |
|---|---|---|
| 24 | V6 - Tabular Shift View | # User Story<br>As a volunteer, I want a table view of shifts with filters so I can find positions efficiently.<br><br># Acceptance Criteria<br>- Table display<br>- Filter by role, date, availability<br>- Sort options |
| 25 | V7 - Set Unavailability | # User Story<br>As a volunteer, I want to mark when I am unavailable so I donâ€™t get assigned then.<br><br># Acceptance Criteria<br>- User enters unavailable times<br>- System respects availability<br>- Prevents assignments in blocked time |
| 26 | V8 - Trade Shifts | # User Story<br>As a volunteer, I want to offer or trade shifts so schedules can be flexible.<br><br># Acceptance Criteria<br>- Offer shifts as â€œup for transferâ€<br>- Direct trade option requiring approval<br>- Notifications for offers/acceptances |
| 27 | V9 - View My Hours | # User Story<br><br>As a volunteer, I want to see how many hours I work so I can track my workload.<br><br># Acceptance Criteria<br><br>- Shows total hours per day/event<br>- Includes assigned and confirmed shifts<br>- Hours are based on confirmed attendance when available |
| 28 | V10 - View Othersâ€™ Hours (Anonymous) | # User Story<br>As a volunteer, I want an anonymous view of hours worked so I understand fairness.<br><br># Acceptance Criteria<br>- Aggregated/anonymous display<br>- No personal identifiers |
| 29 | V11 - View Trade Board | # User Story<br>As a volunteer, I want to see available shift trades so I can request new shifts.<br><br># Acceptance Criteria<br>- List of shifts up for trade<br>- Request trade UI |
| 30 | V12 - Join Event | # User Story<br><br>As a volunteer, i want to join an event (shift plan) using a link, so that i can start managing my shifts<br><br># Acceptance Criteria<br><br>- User only available within an event once joined<br>- Secure joining: users canâ€™t join an event without a link |
| 32 | MR 1 Feedback Incorporation | |
| 33 | Process Compliance & Issue Management | |
| 34 | Initial Project Setup | |
| 37 | Cypress-setup | The basic setup for e2e tests |
| 38 | V14 - Auction Shift | # User Story<br><br>As a volunteer, if I donâ€™t want a shift anymore, I want to be able to set it as available for other volunteers<br><br># Acceptance Criteria<br><br>* Set assigned shift up for auction<br>* Other volunteers can immediately reassign to them<br>* Does not need reconfirmation of the auctioneer<br>* Notifications for successful auction |

| IID | Title | Description |
|---|---|---|
| 39 | V15 - View My Points | # User Story<br><br>As a volunteer, I want to see my earned points so I understand my compensation<br><br># Acceptance Criteria<br><br>* Table/list of points per shift<br>* Total points aggregated<br>* Points factor in incentives & auto-assignment preferences |
| 40 | V16 - Redeem My Points | # User Story<br><br>As a volunteer, I want to redeem my earned points for rewards so I benefit from my contributions<br><br># Acceptance Criteria<br><br>* Volunteer sees a list of available rewards + point cost<br>* System validates that the user has enough points<br>* Redemption consumes points and grants:<br> * Monetary/event-token discount<br> * Priority self-assignment window<br> * Other defined benefits<br>* Confirmation + notification is shown<br>* Redemption is logged in the audit log |
| 41 | V17 - View Reward History | # User Story<br><br>As a volunteer, I want to view my reward redemption history so I have transparency about my point usage<br><br># Acceptance Criteria<br><br>* Shows all redemptions in a (paginated) list<br>* Shows date, reward, point cost<br>* Includes remaining point balance<br>* Historical records cannot be edited. |
| 42 | N6 - Automatic Feedback Notification | # User Story<br><br>As the system, I want to send volunteers a feedback link after the event so they can provide feedback<br><br># Acceptance Criteria<br><br>* Only volunteers assigned to the shift plan are notified<br>* Sent immediately after the event end time<br>* Includes the feedback URL (which has to be set beforehand in a fitting UI tab (see [SP21](https://reset.inso-world.com/repo/2025ws-ase-pr-group/25ws-ase-pr-qse-02/-/issues/43))) |
| 43 | SP20 - Configure Feedback URL | # User Story<br><br>As a shift planner, I want to set a feedback URL for a shift plan so volunteers can provide feedback<br><br># Acceptance Criteria<br><br>* Each shift plan has an optional feedback URL<br>* Feedback URL can be set in UI<br>* Must validate itâ€™s a valid URL |

| IID | Title | Description |
|---|---|---|
| 44 | SP21 - Configure Point Redemption Rules | # User Story<br><br>As a shift planner (or admin), I want to define how volunteers can redeem their points so I can control incentives for future events.<br><br># Acceptance Criteria<br><br>* Admin/planner can define reward categories, e.g.<br> * Merchandise discount<br> * Priority access to preferred shifts<br> * Event food vouchers<br> * Early self-assignment phase<br>* For each reward, planner/admin can define:<br> * Required points<br> * Reward type (discount %, priority bonus, privilege unlock, etc.)<br> * Validity (event-only or global)<br>* Redemption rules must be versioned (so previous events keep their rules)<br>* Volunteers see only rewards applicable to events they are part of |
| 45 | S1 - Volunteer Reliability Score | # User Story<br><br>As the system, I want to maintain a reliability score per volunteer so that shift planners understand attendance likelihood<br><br># Acceptance Criteria<br><br>* Score computed based on previous attendance<br>* Score shown in auto-assignment suggestions<br>* Score shown in volunteer stats (non-public) |
| 46 | S2 - Apply Discount / Priority Automatically (System) | # User Story<br><br>As the system, I want to apply redeemed perks automatically during future event workflows so volunteers receive the benefits<br><br># Acceptance Criteria<br><br>* If volunteer redeemed event discount, total cost shown already reduced<br>* If volunteer redeemed priority assignment, their self-assign actions bypass priority checks for the allowed window<br>* If volunteer redeemed shift preference boost, the auto-assignment engine includes an extra score<br>* All perks are visible in the volunteerâ€™s profile under â€œActive Perksâ€□ |
| 47 | SP19 - Export Shift Plan | # User Story<br><br>As a shift planner, I want to export shift plans in CSV and Excel formats so I can share them externally<br><br># Acceptance Criteria<br><br>* Export includes all shifts + roles + assignments<br>* Download available as CSV or XLSX<br>* Filters apply to export if active |
| 48 | SP18 - Configure Point System | # User Story<br><br>As a shift planner, I want to configure point values so volunteers are fairly rewarded<br><br># Acceptance Criteria<br><br>* Set base points per shift<br>* Set incentive values (per role or shift)<br>* Set event-level discount rate<br>* Values must be retrievable via API |
| 49 | SP17 - Record Attendance | # User Story<br><br>As a shift planner, I want to record whether a volunteer attended a shift so that reliability and compensation can be calculated<br><br># Acceptance Criteria<br><br>* Planner marks each volunteer as present, late, or absent<br>* Attendance updates reliability score<br>* Absence triggers a notification (optional)<br>* Recorded attendance is visible in shift statistics |

| IID | Title | Description |
|---|---|---|
| 50 | SP16 - Constraint notifications | # User Story<br><br>As a shift-planner, I want to be notified when the constraints on the shift plans are violated<br><br># Acceptance Criteria<br><br>* Configurable rules<br>* Notify on direct assignment/changes |
| 51 | SP15 - Validate logical constraints regularly | # User Story<br><br>As a shift-planner, I want the system to validate constraints on the event, even if the scope spans over multiple shift plans<br><br># Acceptance Criteria<br><br>* Constraints are validated in regular time intervals |
| 52 | SP14 - Apply logical constraints to shift plans in an eve | # User Story<br><br>As a shift-planner, I want to apply logical constraints from a set of pre-defined constraints<br><br># Acceptance Criteria<br><br>* Choose type of logical constraint<br>* Apply parameters |
| 53 | SP13 - Create Volunteer Join Link | # User Story<br><br>As a shift-planner, I want to generate an invite link for volunteers to a shift plan.<br><br># Acceptance Criteria<br><br>* Generate new links for a shift plan<br>* Revoke existing links |
| 54 | SP12 - Shift Statistics | # User Story<br><br>As a shift-planner, I want to view volunteer shift statistics so I understand staffing.<br><br># Acceptance Criteria<br><br>* Totals per person/day/event<br>* Statistics include attendance-based reliability metrics |
| 55 | SP11 - Auto-Assignment Suggestions | # User Story<br><br>As a shift-planner, I want an algorithm to suggest volunteers so staffing is optimized.<br><br># Acceptance Criteria<br><br>* Suggest volunteers in table<br>* Considers hours, availability, breaks, night rules<br>* Algorithm incorporates preference scoring and incentive-based compensation<br>* Auto-assignment output includes expected points for assigned volunteers. |
| 56 | SP10 - Manage Volunteer Roles | # User Story<br><br>As a shift-planner, I want to manage volunteer roles so assignments match skills.<br><br># Acceptance Criteria<br><br>* Add/remove volunteer roles |
| 57 | SP9 - Assignment Notifications | # User Story<br><br>As a shift-planner, I want notifications for assignment changes so I am aware of shifts updates.<br><br># Acceptance Criteria<br><br>* Configurable rules<br>* Notify on direct assignment/changes |

| IID | Title | Description |
|---|---|---|
| 58 | SP8 - View Trade Requests | # User Story<br><br>As a shift-planner, I want to see shift auctions and open trade requests to gain insights about volunteer interests.<br><br># Acceptance Criteria<br><br>* Table of trade requests auctions |
| 59 | SP7 - Lock/Unlock Schedule | # User Story<br><br>As a shift-planner, I want to lock/unlock shift plans so volunteer changes can be controlled.<br><br># Acceptance Criteria<br><br>* Lock edits/self-assign/trading<br>* Admin override possible |
| 60 | SP6 - Direct Assign Volunteer | # User Story<br><br>As a shift-planner, I want to assign volunteers directly so staffing is ensured.<br><br># Acceptance Criteria<br><br>* Direct assignment UI<br>* Conflicts validated |
| 61 | SP5 - Lock Shift | # User Story<br><br>As a shift-planner, I want to lock individual shifts so they can't be changed.<br><br># Acceptance Criteria<br><br>* Lock/unlock single assignment<br>* Locked state visible |
| 62 | SP4 - Define Positions & Rules | # User Story<br><br>As a shift-planner, I want to define positions and constraints so assignments follow rules.<br><br># Acceptance Criteria<br><br>* Define role count & constraints<br>* Enable/disable self-assignment<br>* Planner can configure point values (base, incentive factor)<br>* Planner can set event-level discount rate for dynamic point calculation. |
| 63 | SP3 - Link Shift to Activity | # User Story<br><br>As a shift-planner, I want to link shifts to activities of the event schedule so assignments match event flow.<br><br># Acceptance Criteria<br><br>* Select activity for shift<br>* Can only select from activities imported via PreTalx API<br>* If activities change in PreTalx, linked shifts are automatically updated (see [S3](https://reset.inso-world.com/repo/2025ws-ase-pr-group/25ws-ase-pr-qse-02/-/issues/71))<br>* Visible in shift detail |
| 64 | SP2 - Manage Shifts | # User Story<br><br>As a shift-planner, I want to create and edit shifts so scheduling is accurate.<br><br># Acceptance Criteria<br><br>* CRUD shift<br>* Set time/location/role/etc.<br>* Planner can mark volunteers as present/absent after a shift<br>* Marking absence updates the volunteer reliability score |

| IID | Title | Description |
|---|---|---|
| 65 | SP1 - Access Only Assigned Plans | # User Story<br><br>As a shift-planner, I only want to see my assigned shift plans.<br><br># Acceptance Criteria<br><br>* Â Access restricted by event<br>* No visibility into other plans |
| 66 | ADM1 - Manage Events | # User Story<br><br>As an admin, I want to manage events so I can set up the system.<br><br># Acceptance Criteria<br><br>* CRUD events |
| 67 | ADM2 - Clone Events | # User Story<br><br>As an admin, I want to clone events so I can reuse configurations.<br><br># Acceptance Criteria<br><br>* Copy event setup, roles, optionally shifts |
| 68 | ADM3 - Manage Roles | # User Story<br><br>As an admin, I want to manage user types within an event of joined users.<br><br># Acceptance Criteria<br><br>* CRUD roles |
| 69 | ADM4 - Create Shift Join Link | # User Story<br><br>As an admin, I want to generate and manage invite links so that users can join a specific shift plan as a shift planner.<br><br># Acceptance Criteria<br><br>* Generate new links for a shift plan<br>* Revoke existing links |
| 70 | ADM5 - View Users | # User Story<br><br>As an admin, I want to see all registered users<br><br># Acceptance Criteria<br><br>* List of all registered users |
| 71 | S3 - PreTalx Integration | # User Story<br><br>Implement integration with the PreTalx API to sync event activities and ensure shifts stay aligned with the event program.<br><br># Acceptance Criteria<br><br>* Activities visible in UI only if PreTalx integration is active<br>* Editing shifts shows PreTalx activity list<br>* Linked shifts update automatically when activities change<br>* Planners receive notifications for changes<br>* System logs all sync operations and errors |
| 72 | Establish Integration Test Framework | |
| 73 | Create Integration Tests | |
| 75 | Volunteer UI Mockup creation | |
| 76 | Endpoint Definition | Add a basic definition of needed endpoints. Create according dtos and also adapt existing entities accordingly. |
| 78 | Frontend Setup | Import components, create page structure, set up basic branding & styling |
| 79 | Datagenerator | Create DB tables and insert test data using liquibase |
| 80 | Database Setup | |
| 81 | Basic Endpoint Design | |
| 82 | Exception Handling | Establish clean exception handling (with custom exceptions) |

| IID | Title | Description |
|---|---|---|
| 83 | (Spring Security) Authentication | * Implement proper authentication to ensure correct application behavior (volunteers can only access their own respective events, ...)<br>* Implement Spring Security in endpoints<br>* Make sure, that the openapi specs also expect a bearer for the secured endpoints |
| 84 | Switch to Java 25 and build fixes | |
| 85 | Add githooks and checkstyle | |
| 87 | Implement service CRUD functionalities (volunteer) | |
| 89 | Set up CI | |
| 90 | Unit-Test Setup | Setup Tests with JUnit in backend |
| 91 | Shift Location definition | It is important, that a shift only has one primary activity/location.<br>This is because otherwise shifts would stretch accross multiple locations in the calendar view which is not possible.<br><br>Therefore the following rules need to be followed:<br>- No activity:<br>- One location can be defined as the main location<br>- Additional ones can be added<br>- One activity:<br>- The primary location is automatically taken from the activity<br>- Additional ones can be added<br>- Multiple activities:<br>- The user has to specify which activity is the primary one |
| 94 | [FE] Add page permission guards | Add guards to the frontend that handle:<br>- users navigating to pages that they are not a part of (events, shifts)<br>- users navigating to pages that they do not have permission for (admin pages) |
| 95 | Implement Cypress Navigation tests | Implement all cypress Navigation tests for all currently available pages of the volunteer |
| 96 | Admin & Shift-Planner UI Mockup Creation | |
| 97 | Shift-Planner UI Mockup Creation | |
| 98 | Fix githook regex | |
| 100 | Interview | An interview with Felix Hawranek |
| 101 | ADM6 - Manage Locations | # User Story<br><br>As an admin, I want to manage Locations for an event.<br><br># Acceptance Criteria<br><br>* CRUD Locations |
| 102 | Set up end2end CI | Right now the end2end stage in the gitlab-ci.yml is commented out since it didn't work back then (and wasn't needed at this time). DB and keycloak setup was established but the frontend page was not showing any content. |
| 103 | Add exemplary endpoint test | Add an exemplary endpoint test |
| 104 | Fix id type | Currently the Id types are mixed up (String and long (with @NotNull)) |
| 105 | Add csv/excel import functionality | Also keep creating locations in mind |
| 106 | [FE] API Integration | |
| 108 | MR2 Feedback Evaluation | |

| IID | Title | Description |
|---|---|---|
| 109 | Add Trust Alerts | - heuristics to detect strange behavior<br> - spamming<br> - many registrations (overall or in specific time)<br> - many signed-up positions in same shift<br> - many trade requests<br> - few time between signed-up shifts<br> - ...<br>- Dashboard with users and the warnings that they triggered<br>- Admin/Shift Planner gets alerted and can decide, if:<br> - behavior is okay/valid and no additional actions needed<br> - talk to volunteer and do follow action (kick because of malicious behavior, reset all volunteer behvaiors, do supervision/tutorial, ...)<br> - needed volunteer management actions:<br> - ban from event (not able to re-join, clear all signups, trades,...)<br> - reset volunteer (eg after talk w volunteer) -\> notification for volunteer<br> - locken/disablen von vol<br>- What it solves<br> - Helps mitigating malicios behavior<br> - Optional supervision if volunteer doesn't understand application<br><br>Other Notes/TODOs:<br>- admin view on /<br>- view trust alerts<br> - triggered kind (enum?)<br> - action buttons (ban, reset, lock)<br>- GET endpoint to get all trust alerts<br>- --> Check how to implement the trust alert triggering in general |
| 110 | Implement Leaderboard based on worked hours | Implement endpoint(s):<br><br>- Full Leaderboard should be visible for Admin and Shift Planner<br>- Leaderboard with Top 5 (or 10) volunteers should be visible for all volunteers (event based<br>- Dto ranked by hours. total rank, array of ( username, rank )<br><br>Creates incentive to grind more |
| 111 | Set up PreTalx Demo for presentation | To show how it is integrated in our workflow |
| 112 | Frontend containerization | |
| 113 | [FE] UI simplification | make UI as slim as possible.<br>less text, more intuition, more contrast<br>- tooltips instead of descriptions<br>- icons instead of labels |
| 114 | OpenAPI Spec build target | Backend should be extended so that it may provide a openapi spec file during build, so that the frontend can generate clients based on that in CI, to pass the build. |
| 115 | [Shiftservice] API returns 403 | Currently, auth works so far:<br>- JWT is parsed and issuer verified<br>- Authorities are empty, as no roles are present<br><br>Somehow, api requests still fail with 403.<br>These are the backend logs i could acquire, look good somehow:<br>```<br>Securing OPTIONS /api/v1/me/profile<br>shiftservice-1 \| 2025-12-10T06:11:54.579Z DEBUG 1 --- [nio-8080-exec-1]<br>o.s.s.w.a.AnonymousAuthenticationFilter : Set SecurityContextHolder to anonymous SecurityContext<br>shiftservice-1 \| 2025-12-10T06:11:54.582Z DEBUG 1 --- [nio-8080-exec-1]<br>o.s.security.web.FilterChainProxy : Secured OPTIONS /api/v1/me/profile<br>shiftservice-1 \| 2025-12-10T06:11:54.608Z DEBUG 1 --- [nio-8080-exec-2]<br>o.s.security.web.FilterChainProxy : Securing GET /api/v1/me/profile<br>shiftservice-1 \| 2025-12-10T06:11:54.696Z DEBUG 1 --- [nio-8080-exec-2]<br>o.s.s.o.s.r.a.JwtAuthenticationProvider : Authenticated token<br>shiftservice-1 \| 2025-12-10T06:11:54.696Z DEBUG 1 --- [nio-8080-exec-2]<br>.s.r.w.a.BearerTokenAuthenticationFilter : Set SecurityContextHolder to UserAuthenticationToken<br>[Principal=at.shiftcontrol.shiftservice.auth.user.VolunteerUser@13f33c8e, Credentials=[PROTECTED], Authenticated=true, Details=WebAuthenticationDetails [RemoteIpAddress=172.22.0.5, SessionId=null], Granted Authorities=[]]<br>``` |

| IID | Title | Description |
|---|---|---|
| 116 | Rework ShiftPlanScheduleDto | As per the new UI's requirements rework the `ShiftPlanScheduleDto`.<br><br>This is the current rough draft, but it needs forther discussions:<br><br>```ts<br>{<br>day: Date,<br>venues: {<br>venue: VenueDto,<br>displayShiftColumnCount: number,<br>activities: ActivityDto[],<br>shifts: {<br>shift: ShiftDto,<br>column: number<br>}[]<br>}<br>}[]<br>}<br>``` |
| 117 | Entity Setup Audit | Make sure that all primitives either use @Min and @Max or @Range. Also do a complete check if all entities are properly configured and that the casdcading configurations are properly set.<br><br>Also add/check the validation annotations in the dtos (String lengths, etc) |
| 118 | Implement ShiftPlan Service and outsource statistics into separate service | |
| 120 | Implement usage of emergency TimeConstraint | Utilize the already implemented emergency TimeConstraint to do respective actions (notifications, warnings, etc)<br><br>Endpoints needed:<br><br>- add flag in at.shiftcontrol.shiftservice.dto.AssignmentDto for signaling that volunteer cannot attend<br>- Auction endpoint (2 possible ways to implement):<br>- Either implement a createAuction endpoint in SignupEndpoint to create an auction for such a flagged slot<br>- Reuse the existing auction endpoint (at.shiftcontrol.shiftservice.endpoint.PositionSlotEndpoint#auctionAssignment) and adapt permissions so that the shiftPlanner can create this auction (for this user) (--\> not rely on userProvider.getCurrentUser().getUserId() in this case)<br>- Create notficiations when setting constraints that causes conflicts<br><br>Use case for planner: See current conflicts and create auction for this slot |
| 121 | procando preparation | |
| 123 | FAQ & Integration Script | Create a document with topics that deal with important integration question of SC, specifically such that might be relevant at MR3.<br>eg:<br>- how do volunteers get to sign up, who is qualified/trusted<br>- how do we justify the scope of import/planning in SC<br>- how are malicious volunteers handled<br>- how are volunteer rewards integrated<br>- which benefit do organizators have using SC, what are their outputs at the end of an event<br><br>these answers should be presented as precise and simple understandable as possible, so that the doc could be used as a FAQ and presentation material of SC. |

| IID | Title | Description |
|---|---|---|
| 124 | Add handling/conversion of PositionSlot/Trade/Auction | Right now the logic (and mapping) behind PositionSlot, Trading and Auctioning is not implemented, see: https://reset.inso-world.com/repo/2025ws-ase-pr-group/25ws-ase-pr-qse-02/-/blob/master/backend/shiftservice/src/main/java/at/shiftcontrol/shiftservice/mapper/ShiftMapper.java<br><br>This issue consists of 4 Parts:<br><br>1. Handling the Mapping of PositionSlots: This will be the easiest part since the PositionSlotMapper is already implemented (only think about logic regarding PositionSignupState and rewardPoints)<br>2. Build up of TradeDto: Currently there are the TradeDto and the AssignmentSwitchRequest. There needs to be a logic (service/dao and/or mapper) implemented to build up the according dto based on the entity<br>3. Build up of AuctionDto: Same as for TradeDto, but instead there is no equivalent Auction entity existing --\> Check how to implement the AuctionDto build up and implement it accordingly<br>4. Insert these implemented logic in current placeholders (see ShiftMapper above where null is currently used instead of actual logic) |
| 125 | Various API Changes | |
| 127 | [FE] Add preference sliders | |
| 128 | [FE] Refactor notification settings to be email/push per type | |
| 129 | [FE] Add trade selection on "request signup" | |
| 130 | ShiftDto Refactor | - lockstatus is nullable per openapi def --\> Add @NotNull<br>- tradeinfo should be moved to positionslotdto<br>- an auctioninfo in the positionslotdto would be nice |
| 132 | Integrate Keycloak Client and role checks in backend | make notification updates with patch<br>- list of notificationtype with a list of channels(empty if removed) |
| 133 | Implement volunteer/planner assignments persistence | User type "AssignedUser" needs to fetch its permissions from the database in order to be granted access to resources.<br>A minimal table for this could contain<br>- "userId": String<br>- "accessType": VOLUNTEER \| PLANNER<br>- "shiftId": Long<br><br>Admin users ("AdminUser") don't need access there as they are granted access everywhere.<br><br>Upon event join as volunteer/planner, a new entry in this table should be created. |
| 134 | Implement ShiftPlan Invite/Join functionality | |
| 135 | [FE] integrate schedule view | |
| 136 | Extend SIGNUP_POSSIBLE cases in ShiftDao | The current logic for checking if a signup is possible (_SIGNUP_POSSIBLE_) only checks the slot capacity and if an auction of the slot exists.<br><br>In order to really show all _SIGNUP_POSSIBLE_ cases, open trade requests also need to be considered. Additionally, only shifts/slots have to be shown which are relevant (role wise) for the user --\> Only show shifts where the role in a position slot is part of the volunteer's roles (doesn't make sense to show "possible shifts" which are actually not possible because the volunteer is not qualified for this position |
| 137 | DO ONLY IF PERFORMANCE ISSUES: Implement ca | Currently there are some heavy queries with streams and filtering implemented. Some examples:<br><br>https://reset.inso-world.com/repo/2025ws-ase-pr-group/25ws-ase-pr-qse-02/-/merge_requests/26/diffs#093200fd7eda600e0015b362aadf12bb97c40463_59_82<br><br>https://reset.inso-world.com/repo/2025ws-ase-pr-group/25ws-ase-pr-qse-02/-/merge_requests/26/diffs#b006f706b22c60048be6532ad8613a24cda7b459_76_85<br><br>and some more.<br><br>Go through the code and find all occurrences which are/could be a problem (performance wise) and implement caching if possible |
| 138 | Add Event Service | Unavailabilities will be done in #142 |
| 139 | Fix ShiftPlan API | |
| 140 | Add Dashboard endpoint for home screen (all events) | |
| 141 | Implement User Profile and notifications entpoint | Parent: [N2 - Notification Preferences](https://reset.inso-world.com/repo/2025ws-ase-pr-group/25ws-ase-pr-qse-02/-/issues/10) |
| 142 | Add Unavailabilities in EventEndpoint and EventService | |

| IID | Title | Description |
|---|---|---|
| 143 | [FE] Integrate event/plan navigation | |
| 144 | [FE] Integrate calendar view | |
| 145 | CRUD for volunteer Roles | Implent CRUD for roles and assigning roles.<br><br>Parent Ticket<br>[SP10](https://reset.inso-world.com/repo/2025ws-ase-pr-group/25ws-ase-pr-qse-02/-/issues/56) |
| 146 | List calendar schedule filter values | list available locations and roles in a plan that can be used in a dropdown for filtering the calendar/schedule<br>also, list the first and last day that contains a shift in the plan |
| 147 | Fix requestbody annotation for GET and DELETE endpoints | |
| 148 | Add time range to activities | |
| 149 | Fix Statistics Calculation | Event statistics are incorrect / don't match with shiftplan statistics |
| 150 | Remove @Data annotation and add propper getter/setter and toString methods to entities | |
| 151 | Fix calendar endpoint | - calendar endpoint:<br>- actually date should always be set for searching<br>- on the other hand, date field in return should not be nullable<br>- not only location column count should be consistent across all days, but also the locations itself; even if no shifs in the location at a day |
| 152 | Implement set preference + include in positionslot | Implementation of setting a preference to a eligible position slot should be implemented. Positionslots with preference should also include this in the dto so the user can view their set preference.<br>Preferences will be used for the auto-assign feature that is planned (?). |
| 153 | Establish PreTalx integration | Set up a PreTalx instance to work with (if setup needed) and integrate API in our system |
| 154 | Add most important endpoints and DTOs for admin and | https://hedgedoc.xerus.at/Gq3qoeD_T367jsvsa-pBrw |
| 155 | Implement event CRUD service | Endpoints already exist. Implement all other layers and finally use service method in endpoint. Keep in mind that this functionality is only allowed by the admin |
| 156 | Add Admin User views | Implement all layers for following functionality:<br><br>There are 2 entirely different and separated user views:<br><br>- Application level user view:<br>- Can be acccessed by Admin only<br>- fetches users from keycloak (-\> not required to be part of shift plan)<br>- Shows: Email, username, assigned shift plans<br>- What can be done here: Manually assign/unassign user's ShiftPlans |
| 157 | Add shift CRUD with activity suggestion and PositionSl | - when creating, suggest a list of activities:<br>- narrow down by start/end time of creating/editing shift (search params)<br>- any intersection of shift & activity date<br>- add tolerance to activity start/end time (search param)<br>- search dto:<br>- time filter, optional dto:<br>- start time<br>- end time<br>- tolerance (minutes)<br>- name filter, optional<br>- Show all locations for Locations List (if no activity selected)<br>- activity and location mutually exclusive<br>- List Endpoint needed for activity and location<br>- Create, Update, Delete Endpoints<br><br>Also keep PositionSlots CRUD in mind (on shift management page):<br><br>- reward points (???? free choice?) --\> Also relevant for trading/auctioning (eg urgent ones)<br>- name (needs to be added since currently not a field??)<br>- property in positionslot to skip being filled by auto-assign algorithm<br>- description<br>- amount volunteers (desiredVolunteerCount)<br>- role requirements dropdown --\> According endpoint do get all roles |
| 158 | Include shift column counts for empty locations in get s | As of now, the schedule call only includes the location infos for those that do not have any shifts on the requested day.<br>Instead, the schedule should consistently return for all days all locations with their required column count to enable consistent display across all days. |
| 159 | Emergency TimeConstraint | We need the ability to create TimeConstraints with the type `EMERGENCY` which have the checked constraint that such a constraint has to be increments of whole days. These will later on trigger notifications for admins/planners. |
| 160 | Create mock data for detailled event | |

| IID | Title | Description |
|---|---|---|
| 161 | Implement Multi-Day handling in ShiftPlanSchedule | Needs to be done in at.shiftcontrol.shiftservice.dao.impl.specification.ShiftSpecifications#matchesSearchDto |
| 162 | LockStatus change and endpoint | - Rename to LOCKED, SELF_SIGNUP, SUPERVISED<br>- needs to be ShiftPlan specific (not Shift specific as currently implemented) --\> move it to ShiftPlan entity but still show it in ShiftDto (get status from the ShiftPlan)<br>- Endpoint needed to change status<br>- Add according validations |
| 163 | Implement location CRUD | Implement all layers. Keep in mind that this functionality is only allowed by the admin<br><br>- admin creates location per event<br>- name, description<br>- Need to add List of Locations to event (because event with locations can exist before ShiftPlans and Shifts exist) --> Need to add validation so that only event-related locations can be assigned to shifts (and not other ones)<br>- Create, Update, Delete Endpoints (Admin only) |
| 164 | Implement Signup Dashboard functionality | - change shift plan phase (LockStatus) --\> Keep #162 in mind<br>- (**_auto assign functionality?_**) --\> Check what/how to implement (and create follow up ticket if needed)<br>- view unassignment requests<br>- Endpoint to view all requests (as planner/admin)<br>- Endpoint to accept/decline request (as planner/admin) |
| 165 | Add Event Export functionality | Only create a simple endpoint and basic UI functionality |
| 166 | Notification Microservice Push Functionality | |
| 167 | Autoassign functionality | |
| 168 | Fix Filtering in ShiftPlan Schedule (Calendar) | * change filtering from roleNames to roleIds<br>* Rename ScheduleViewTypeEnum<br>* Make scheduleViewType a Collection and adapt logic so that:<br>* Empty List: Show everything (like currently if scheduleViewType is not present<br>* _MY_SHIFTS / SIGNUP_POSSIBLE (single): Filter like currently_<br>* _Both MY_SHIFTS & SIGNUP_POSSIBLE: Show all user Shifts + all Shifts where Signup would be possible (and don't show user unrelated shift or shifts where signup is not possible)_<br>* change location filtering from names to ids |
| 169 | [FE] Implement joining shiftplan | |
| 170 | [FE] Implement notification settings | |
| 171 | LockStatus checks | When the Lockstatus gets changed, certain things have to be considered and done.<br><br>SUPERVISED --\> SELF_SIGNUP<br><br>* all Assignments that are up for auction have to be cancelled<br>* all trades including one of those assignments have to be cancelled |
| 172 | Implement RewardPoints functionality | |
| 173 | RabbitMQ setup | Setup RabbitMQ in the shiftservice so that events can be sent to rabbitmq |
| 174 | [FE] Integrate dashboard upcoming shifts | |
| 175 | [FE] Integrate trade & auction boards | |
| 176 | Fix unassigned calculation in dashboard | |
| 177 | Implement ShiftPlan CRUD | |
| 178 | Implement email-sending functionality | Handle this directly in Notification Microservice |
| 179 | Check if all thrown exceptions are our own custom exce | Also check if correct error code and message is returned.<br><br>Also check if Lombok's @NonNull is handled correctly (because currently they always return 500(??) without message)<br><br>Also adapt messages so that users can understand them easily + dont have to deal with ids or cryptic error messages<br><br>Maybe consider returning errodtos |
| 180 | Refactor Join Endpoints | |
| 181 | Add Security checks and check all endpoint permission | Add unified check for Admin only functionality (for example through annotations) and use these annotations in every relevant endpoint/service).<br><br>Also check if all other permissions (ShiftPlanner only, etc...) are correctly checked |
| 182 | Vibecode Unit Tests | |
| 183 | Add more cypress tests | |
| 184 | PreTalx Sync | |
| 185 | [FE] Integrate unavailability | |

| IID | Title | Description |
|---|---|---|
| 186 | Check if all dto validations are present, valid and complete | |
| 187 | [FE] Event management | |
| 188 | [FE] Add toasts and API error handling | |
| 189 | Fix mixed behavior for update endpoints (patch vs post) | |
| 190 | Create Location IT | |
| 191 | [FE] Location management | |
| 192 | Gather same occurring validation checks in helper methods | |
| 193 | Add openapi tags for same endpoints | Since we split up the endpoints, we need to use tag annotations in ALL split up endpoints to have a single endpoint in the frontend:<br><br>![grafik.png](/uploads/cbbbbf1731514425562e05e4cf52a733/grafik.png){width=900 height=518}<br><br>1. Check if this implementation really works (endpoints are only shown as one endpoint each in frontend)<br>2. If yes: Set these annotations in all split up endpoints<br>3. If No: Find another working solution and implement it |
| 194 | [FE] Shiftplan manage + invite | |
| 195 | Frontend Edging | |
| 196 | Handle invalid path params on all pages and redirect to root | |
| 197 | Hide unavailability for admins (if not part of event)? | |
| 198 | Adapt exception messages to user friendly messages (no Id, or unrelevant details) | |
| 199 | [FE] Roles management | |
| 200 | [FE] Plan users management | |
| 201 | [FE] App users management | |
| 202 | [FE] Activity management | |
| 203 | [FE] Shift Management | |
| 204 | Rabbit MQ Events | Add ApplicationEvents for every Create, Update and Delete action. |
| 205 | Handle admin case in shiftplan join | |
| 206 | Provide list of volunteer and planner plans in user profile | |
| 207 | [FE] Position slot management | |
| 208 | Review input validator consistency with backend | |
| 209 | Handle activities & shifts without location in calendar schedule endpoints | |
| 210 | C# Event Codegeneration | |
| 211 | Create volunteer+planner invite on plan creation | All params as unspecific as possible |
| 212 | Invalidate attributesCache | |
| 213 | [FE] Success & Error toasts everywhere | |
| 214 | [FE] Integrate signup for positionslots | |
| 215 | [FE] Add leaderboard | |
| 216 | [FE] Add signup dashboard | |
| 217 | Add user profile endpoint to get all relevant (ongoing) plans | |
| 218 | Handle leaderboard equal ranks | equal ranks should be calculated as such:<br>- \#1 10h<br>- \#2 9h<br>- \#2 9h<br>- \#4 8h<br><br>in the frontend, they will be shown distributed accordingly in the rankings |
| 219 | Fix swapping volunteers when trading | currently, the volunteers are not really reassigned when trading position slots |
| 220 | [FE] Receive real-time notifications | |
| 221 | roles, locations, activities do not load in shift component when built in prod mode | |
| 222 | Leave ShiftPlan functionality | User should be able to leave ShiftPlan after joining<br><br>Also invalidate cache after leaving |
| 224 | Create new volunteer if not existing | user management default values fÃ¼r neue user (volunteer und admin)<br>- 404 user does not exist --> create user (in appropriate places (not everywhere)<br>- --> Create user on relevant endpoints if not existing yet (for example when calling Profile endpoint, etc ...) |
| 225 | Upgrade volunteer to planner when invited to shiftplan | - Currently not really working? (Maybe FE issue atm)<br>- When one uses an invite link to an already joined plan but with new roles => Join the missing ones |

| IID | Title | Description |
|---|---|---|
| 226 | [FE] Re-route to plan after login when clicking invite | |
| 227 | Request (un)assignment | create and implement endpoint where a user can request assignment and unassignment if shift is supervised |
| 228 | Frontend ir2 hotfix adaptions | |
| 229 | Create reward point export endpoint + Return real points in overviewdtos instead of -1 | |
| 230 | Add simple audit log service with endpoints | |
| 231 | Direct Assign Volunteer | - Endpoint to assign User to slot (add to SignupEndpoint)<br>- Endpoint to get all eligible users for slot |
| 232 | Clone Event functionality | Clone whole event without assignments and invites. Make sure to also clone activities and locations since they are event-bound.<br><br>- copy all event setup:<br>- event props<br>- shiftplan props<br>- locations<br>- roles<br>- shifts<br>- activities |
| 233 | Endpoint to fetch notification recipients for event type | |
| 234 | Ensure error message user friendlyness | |
| 235 | Persist notificationservice items | |
| 236 | Access shiftervice from notificationservice and fetch recipients for type | |
| 237 | Test Data insert cleanup and fixes | Remove old, unused testdata in liquibase and extend the rest with RewardPointsTransaction inserts (since this is completely missing currently (assignments have reward points set, but the user themself don't "have them" rn)) |
| 238 | Create mocked shop for reward point export integration | |
| 239 | move entities to lib | |
| 240 | Handle default notification settings | atm, default is all off, which is probably not wanted.<br>if this behavior is changed, it has to be done where the user fetches its current settings AND where the notificationservice fetches the eligible recipients |
| 241 | [FE] Finish signup in positions | |
| 242 | Deleting invite broken | |
| 243 | date suggestion for activity/shift does not wrap to next day if X hours added | |
| 244 | Validate name uniqueness | - Validate name uniqueness in whole application<br>- Shifplan, location, activity, ..., name uniqueness inside event<br>- Other name validations? |
| 245 | Add Planner User View | - ShiftPlan level user view:<br>- Can be accessed by Admin & Planner<br>- Shows: Email, username, permissions (Planner or Volunteer (Not admin)), Roles, trust alerts<br>- Important for Roles: Only show ShiftPlan relevant roles (planner is not interested in roles of volunteer of a different event) --\> Need to add roles field in ShiftPlan entity to be able to handle ShiftPlan specific/relevant roles<br>- What can be done here:<br>- edit roles<br>- unassign, lock, reset volunteer for shiftplan<br>- users fetched from volunteers relation |
| 246 | Time constraints not considered for position eligibility | When a conflicting time cosntsraint is set, a user should not see "ELIGIBLE" in PositionSlotDto.PositionSignupState for a positionslot.<br>either set to "NOT_ELIGIBLE" or add a enum value "TIME_CONFLICT".<br><br>this could possibly also consider time conflicts with other signups at the same time? |
| 247 | TimeConstraintService produces plain-text error respor | Should be JSON with message as recently refactored |
| 248 | Add withdraw of signup/unassign request | |
